## Pennsylvania Railroad FD-2/FW-1 Flat Cars

Flat cars are always models of great interest, often times because of the loads they carry and many times because of the unique design characteristics incorporated to fulfill a specific purpose. The Pennsylvania Railroad FD-2 and FW-1 flat cars are among the largest ever built, their size and capacity make them truly unique in that regard. In reality, there was only one set of trucks that were shared between the two car bodies depending on the load of the day. The 'flats' saw service on three roads as the Pennsylvania transitioned through the Pen Central and ended up as part of Con Rail. Our models are 33" (838mm) in length and are loaded with detail as the underside photo above shows. We will model all three roads and will also have prototypical loads available.
