## Union Pacific 'Challenger'

Our next modern Union Pacific steam motive power project will be the 'Big' Challenger locomotives. Our production will include: a basic coal version, a basic oil version, a special limited coal version with smoke lifters and two variations of the two-tone gray passenger paint scheme. We will also be including the war-time era Denver & Rio Grande L-97 class as well as the Clinchfield E-3 class single-stack locomotives in our production. Considered by many to be the most aesthetically pleasing locomotive ever built, the Alco 'Challengers' provide us with another great modeling opportunity. This project will again be a collaborative effort with our builder, S J Models Company in Korea and Dalle Electronics, Incorporated. The most immediate source of information regarding this project is our web site (address below), but we will also be doing postal mail updates as the project proceeds. (Products bearing Union Pacific marks are made under trademark license from Union Pacific Railroad Company)
